Toronto, ON M5H 3H1

Attn: Deepak Dhawan, Managing Partner

Dear Mr. Dhawan

Re: Summary of Phase I Environmental Site Assessment (ESA) Potential Environmental Concerns and Phase II ESA – 170 Lakeshore Road East, Port Credit, Mississauga, ON

1.0 INTRODUCTION

Hemmera Envirochem Inc. (Hemmera) was retained by LightPoint Properties GP Inc. (LightPoint) to prepare a summary of Phase I Environmental Site Assessment (ESA) potential environmental concerns and conduct a Phase II Environmental Site Assessment (ESA) at the property located at 170 Lakeshore Road East, Port Credit, Mississauga, Ontario (hereinafter referred to as the Site) as located on **Figure 1**.

The Work was performed in accordance with the Professional Services Agreement (PSA) between Hemmera and LightPoint ("Client"), dated May 31, 2016 ("Contract"). This letter report has been prepared by Hemmera, based on fieldwork conducted by Hemmera, for the sole benefit and use of LightPoint. In performing this Work, Hemmera has relied in good faith on information provided by others, and has assumed that the information provided by those individuals is both complete and accurate. This Work was performed to current industry standard practice for similar environmental work, within the relevant jurisdiction and same locale. The findings presented herein should be considered within the context of the scope of work and project terms of reference; further, the findings are time sensitive and are considered valid only at the time the Report was produced. The conclusions and recommendations contained in this Report are based upon the applicable guidelines, regulations, and legislation existing at the time the Report was produced; any changes in the regulatory regime may alter the conclusions and/or recommendations.

2.0 PROJECT OBJECTIVES AND SCOPE OF WORK

The objective of preparing a summary of Phase I ESA potential environmental concerns was to identify potential environmental concerns with the Site arising from present and past activities on the Site and on the neighbouring properties that may have impacted soil and groundwater. At the time of the investigation, Hemmera understood that LightPoint was considering the purchase of the Site, and Hemmera was retained to carry out the environmental Phase II ESA due diligence on the property. Hemmera was retained to conduct an off-Site investigation to assess and delineate petroleum hydrocarbon impacted soil identified at the Site during the initial on-Site subsurface investigation. We understand that a Record of Site Condition is not required at this time.

3.0 SUMMARY OF PHASE I ESA POTENTIAL ENVIRONMENTAL CONCERNS

The summary comprised of a review of historical information for the Site and neighbouring properties, a review of environmental databases for the Site and neighbouring properties, interviews with a Site representative(s) and regulatory personnel where available, a Site reconnaissance visit, and documentation of the findings.

3.1 SCOPE OF WORK

Preparation of this summary of Phase I ESA potential environmental concerns involved the following main activities:

- Conducting a review of historical archival information for the Site and neighbouring properties, further detailed in **Section 3.3**;
- Conducting interviews with available persons having knowledge of the Site, as detailed in **Section 3.4**;
- Conducting a Site visit to make specific observations at the Site and, from publicly accessible areas, the neighbouring properties, as detailed in **Section 3.5**;
- Reviewing and evaluating the information, as detailed in **Section 3.6**; and
- Preparing this report documenting the activities, findings, and conclusions of the Phase I ESA.

3.2 SITE DESCRIPTION

The Site is approximately 0.28 hectares in size and was occupied by a multi-tenant commercial shopping plaza building with an organic grocery store, a butcher shop and a restaurant .

The location of the Site and regional topographic features are shown on **Figure 1** and a Site plan is shown on **Figure 2**.

Land uses of neighbouring properties are shown on **Figure 3**.

3.3 RECORDS REVIEW

The following records, where appropriate and available, were obtained for review:

- Aerial photographs for the Site and neighbouring properties (dated 1954, 1966, 1977, 1992, 2005 were obtained from the City of Mississauga Historical Aerial Photographs Online Archive and the satellite image dated 2016 was obtained from Google Earth);
- Property use records for the Site and neighbouring properties including historical fire insurance plans (copies of fire insurance plans [FIP] dated 1910, 1928, and 1952; Property Underwriters Plans [PUP] dated 1981; and Property Underwriters Reports [PUR] dated 1998) and historical city directory records (dated 1961, 1966, 1972-73, 1977-78, 1984, 1989, 1994, and 2000) were requested and obtained from Ecolog ERIS;
- Previous environmental reports for the Site, including previous Phase I ESA reports and geotechnical reports. Note that no previous environmental reports were available for the Site;
- Company records for the Site (letters, agreements and photos dated between December 6, 1993 and December 15, 1993 related to a waste oil UST that straddled the property beneath the Site and the adjacent property located at 160 Lakeshore Road East that was subsequently removed see **Section 3.6**); and
- Regulatory information from provincial, federal, and private databases for the Site and neighbouring properties consisting of a review of a standard EcoLog Environmental Risk Information Service (ERIS) database report. The search radius for neighbouring properties included the area within 250 m from the centre of the Site.

The fire insurance records, city directory records, company records and the Ecolog ERIS report are included in **Appendix A** and potential environmental concerns related to the records are summarized in **Section 3.6.**

3.4 INTERVIEWS

During the Site visit, an interview was conducted with Mr. Joe Indovina, the Site representative. Mr. Indovina, is the property owner and a person considered knowledgeable about the Site history and operations. Potential environmental concerns related to the interview are summarized in **Section 3.6.**

3.5 SITE VISIT

A visual survey of the Site was completed by Hemmera on February 22, 2017.

Neighbouring properties were inspected from publicly accessible sidewalks and roadways. Preliminary information obtained from the records review was considered prior to conducting the Site visit.

Land uses of neighbouring properties are shown on **Figure 3**.

Potential environmental concerns related to the Site visit are summarized in **Section 3.6.**

3.6 FINDINGS

3.6.1 Site

A summary of the potential environmental concerns related to the Site are summarized as follows:.

The Site was developed as a residential property sometime before 1928 and was understood to be used as both an residential and commercial property from then to about 1952. The Site was used for commercial land uses from about 1952 to the present.

Table A Summary of on-Site Potential Environmental Concerns and Observations

Year	Property Use	Potential Environmental Concerns and Observations/Source (e.g. aerial photographs, fire insurance records, etc.)
1928	Residential/Commercial	Based on the 1928 fire insurance plan, there appears to be a residential dwelling on the northwest portion of the Site. The land use appears to be residential. The 1928 fire insurance plan depicts two underground gasoline storage tanks (USTs) located on-Site near the southwestern property boundary of the Site. These two USTs appear to be related to a garage and auto show room building that was located at 160 Lakeshore Road East. The location of the two former gasoline USTs is shown on **Figure 2**. The gasoline USTs at the southwestern property boundary of the Site were not present on the 1952 fire insurance plan.
1952 to 1977	Commercial	The 1952 fire insurance plan depicts three gasoline USTs in the southeast central portion of the property and the Site is labelled as a “gasoline service station” and “Elmwood Motors”. The location of the three former gasoline USTs is shown on **Figure 2**. The earliest available aerial photograph from 1954 depicts a commercial building that occupies the Site. The residential dwelling on the northwest portion of the Site appears to have been removed. The aerial photographs from 1966 and 1977 depict a larger commercial building with a different configuration than the 1954 aerial photograph. The duration of the service station operations could not be determined but according to Mr. Indovina (the Site representative), we understand the property was operated as a car vehicle dealership (Elmwood Ford prior to 1976).

Year	Property Use	Potential Environmental Concerns and Observations/Source (e.g. aerial photographs, fire insurance records, etc.)
1977 to present	Commercial	The 1992 aerial photograph depicts a building, consistent with the current day building, located on-Site. During our interview with Mr. Indovina, he indicated the building was constructed in the 1950s or 1960s but based on the aerial photographs, the building appears to have been constructed sometime between 1977 and 1992. Based on a review of company records (i.e., letters and agreements from 1993) and the interview with Mr. Indovina, a former underground waste oil tank that straddled the Site and the adjacent property to the west (located at 160 Lakeshore Road East) was excavated and disposed of in 1993; soil around the UST was removed. We understand that the excavation extended beneath the existing building and the building was supported structurally during the excavation with posts and beams and that the excavation beneath the building was filled with poured instead of imported fill) for structural support of the building. No soil samples were collected from the limits of the waste oil tank excavation. The approximate location of the former waste oil UST is shown on **Figure 2**. A pad-mounted transformer was observed off-Site near the southeastern corner of the Site. The transformer is reportedly owned by the City of Mississauga. Due to the suspected year of construction of the on-Site building (sometime between the 1950s and 1992), the presence of asbestos containing materials, and lead-based paint is possible. No suspect ACMs were observed during the site visit. Paint was observed to be in good condition. Minor quanitities of ozone-depleting substances may be present in refrigeration and HVAC equipement. Listings for the Site in the city directories between 1984 and 1994 included Elmwood Fruit Market, Elmwood Meat Market and La Villa Bakery.

3.6.2 Neighbouring Properties

A summary of the potential environmental concerns related to the neighbouring properties are summarized below.

Table B Summary of Off-Site Potential Environmental Concerns and Observations

Location	Year	Property Use	Potential Environmental Concerns and Observations/Source (e.g. aerial photographs, fire insurance records, etc.)
160 Lakeshore Road East	1928 to 1952	Residential	Based on the 1928 fire insurance plan, there appears to be a commercial building, consistent with the current day building, located on-Site. The property is listed as a garage. The land use appears to be commercial. In the 1952 fire insurance plan, the property is labelled as "Elmwood Motors", as part of the Site at 170 Lakeshore Road East.
	1977 to present	Commercial	The adjacent property at 160 Lakeshore Road East was listed in the city directories as an automotive repair facility between 1977 -78 and 1989 and was operating as a Midas automotive repair facility at the time of the Site visit. Based on a review of company records (i.e., letters and agreements from 1993) and the interview with Mr. Indovina, the former underground waste oil tank that straddled the property beneath the Site and the adjacent property located at 160 Lakeshore Road East was removed (see **Section 3.6.1)**. An AST suspected to be a waste oil was observed on the property at 160 Lakeshore Road East at the time of the Site visit. The location of the waste oil AST is shown on **Figure 2**.

Additional records were identified and reviewed and are not considered potential environmental concerns for the Site based on the distance from the Site, contaminant pathways, the assumed direction of local groundwater flow, and mobility and/or the properties of the associated potential contaminants of concern.

4.0 PHASE II ESA

As a result of the potential environmental concerns identified at the Site and 160 Lakeshore Road East, Hemmera was retained to conduct a Phase II ESA. The work was conducted in general accordance with the Canadian Standards Association (CSA) Phase II ESA standards.

The following main tasks were performed:

- Obtained clearances from various utility representatives, and from a private contractor, with respect to underground utility locations within the proposed assessment areas on-Site.

- Completed a geophysical survey (i.e., an EM61 and ground penetrating radar (GPR) survey) to confirm the presence/absence and locations of potential USTs in the parking lot outside the building, on-Site.
- Obtained a permit from the City of Mississauga to drill the off-Site boreholes on Lakeshore Road East.
- Prior to drilling, to confirm the absence of utilities and to provide more flexibility in determining the final location, daylighted (i.e., vacuum excavate) two off-Site locations to approximate depth of utilities (anticipated to be 1.8 m below ground surface to 2.4 mbgs) or until native material is encountered.
- Managed traffic during the work on Lakeshore Road East using a traffic control contractor.
- Conducted a health and safety kick-off meeting where our health and safety plan was presented to all applicable personnel.
- Advanced six boreholes (four boreholes on-Site and two boreholes off-Site), to depths ranging from 1.5 m to 6.1 m below ground surface (mbgs). Four of the boreholes were instrumented as groundwater monitoring wells. **Figure 2** presents the borehole locations.
- Collected shallow soil samples at regular intervals during borehole drilling, visually classified and recorded headspace vapour concentration measurements using a portable gas detector (RKI EAGLE).
- Selected soil samples from each borehole from the above activity for laboratory analysis of one or more of the following parameters: metals, benzene, toluene, ethylbenzene, xylene (BTEX); PHC fractions F1 to F4, and volatile organic compounds (VOCs).
- Developed the new monitoring wells by purging until the groundwater is observed to be reasonably free of turbidity or until the monitoring well purges what is considered to be dry three times.
- Monitored accessible monitoring wells for subsurface vapour concentrations, water levels and the presence or absence of light or dense non-aqueous phase liquid hydrocarbons (LNAPL/DNAPL; free product).
- Collected groundwater samples from the new monitoring wells for laboratory analysis of one or more of the following parameters: BTEX, PHC (fractions F1 to F4), and VOCs. The groundwater samples were collected using a low flow purging and sampling methodology.
- Completed a vertical and horizontal survey of the newly installed monitoring wells and one existing monitoring well relative to an arbitrary on-Site benchmark to contour groundwater flow direction.
- Stored spoils (water and soil) generated during the assessment in drums and arranged for disposal of the drums.
- Prepared a factual report that describes the field activities and presents the results of the Phase II ESA.

4.1 FIELD ACTIVITIES

Field procedures were conducted in general accordance with the 2011 Ontario Ministry of the Environment and Climate Change (MOECC) *Guidance for Completing Phase Two Environmental Site Assessments* under Ontario Regulation (O.Reg.) 153/04 (Hemmera understands that there is no intent to file a record of site condition (RSC) for the Site at this time and the scope of work was not intended to meet the requirements for filing a RSC), *and* the MOECC *Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act*.

4.1.1 Geophysical Survey

Hemmera retained OnSite Locates Inc. (OSL) to perform a geophysical investigation to identify the presence or absence of underground storage tanks that were reported to have been located on the property using Geonics EM-61 Electromagnetic Induction Survey Instrument and Sensors and Software 250 MHz Ground Penetrating Radar (GPR) instruments. The geophysical investigation was completed on March 13, 2017 and the OSL report is presented in **Appendix B**.

4.1.2 Utility Service Clearances

Prior to proceeding with the Phase II ESA, utility locates were carried out which included using a private utility locate contractor.

4.1.3 Daylighting (Vacuum Excavation / Hydrovacing)

Prior to drilling off-Site locations, hydrovacing was carried out to confirm the absence of utilities. Two locations (BH2 and MW4) were daylighted (hydrovaced) on April 12, 2017. BH2 was advanced to a depth of 1.5 m below ground surface (mbgs) by vacuum excavation/hydrovacing. BH2 could not be advanced further than 1.5 mbgs due to the presence of underground utilities so a monitoring well was not installed at this location; an undocumented sewer was encountered at the bottom of the hole. BH2 was subsequently decommissioned with hydrated bentonite seal and finished at grade with concrete. Monitoring well MW4, was advanced to a depth of 1.8 mbgs by hydrovacing and using a direct push drill rig from a depth of 1.8 mbgs to 6.1 mbgs.

These off-Site borehole locations are shown on **Figure 2**.

4.1.4 Borehole Drilling

Landshark Drilling Inc. was retained by Hemmera to advance five boreholes (four boreholes on-Site [BH1 and MW1 to MW3] on March 14, 2017 and one borehole off-Site [MW4] on April 12, 2017), to depths ranging from 4.5 m to 6.1 m below ground surface (mbgs). Four of the boreholes (BH1 and MW1 to MW3) were advanced using a geoprobe drill rig and as noted in **Section 4.1.3**, MW4 was advanced using a combination of hydrovacing and the geoprobe drill rig.

Note that a borehole was intended to be drilled near the foundation of the southern portion of the building in the vicinity of the former waste oil UST excavation where there were no limit sample results available from the UST removal work completed in 1993 but due to subsurface utilities in the area, the borehole had to be moved to the location of BH1 (i.e., the location intended to investigate the suspected waste oil AST observed on the property at 160 Lakeshore Road East). Hemmera notes that BH1 and MW1 assessed the soil and groundwater quality downgradient of the former waste oil tank excavation.

BH1 was decommissioned with hydrated bentonite seal and finished at grade with concrete.

The borehole locations are shown on **Figure 2**.

4.1.5 Monitoring Well Installation

Monitoring well construction for each of Hemmera's installations included installing a 50 mm diameter polyvinyl chloride (PVC) 10 slot screen, measuring approximately 3.0 m in length, and an un-slotted riser above the screened section. The annular space between the PVC pipe and the borehole wall was backfilled with #2 silica sand to approximately 0.3 m to 0.6 m above the top of the screen pipe and then sealed with hydrated bentonite pellets to approximately 0.6 mbgs. The monitoring wells were then finished with #2 silica sand and a flush-mounted casing secured in concrete to protect the monitoring well.

Following installation, the two new monitoring wells were developed by purging approximately three casing volumes or until the wells were considered dry. The monitoring wells were purged using dedicated tubing and an inertial lift pump; the purge water was placed in a drum on-Site.

Monitoring well installation details are presented on the borehole logs in **Appendix C**.

4.1.6 Soil Sampling

Soil samples were taken at regular depth intervals during drilling using acetate sampling tubes. The samples were collected from the sampling tube using a clean stainless steel trowel and the sampler wore nitrile gloves. The soil removed from the tube was split with one portion of the sample placed in a clean plastic bag for screening. Soil screening included determining textural description, visual physical evidence of impact (e.g.,staining or free product), and measurement of the sample combustible headspace vapour concentration (soil vapour concentration). Soil from the other portion of the tube was promptly placed in a sealed laboratory provided container for possible analysis.

The soil samples submitted for analysis of BTEX, PHC fraction F1 and VOCs, were collected in laboratory provided septum topped 40 mL vials pre-charged with 10 mL of methanol. Approximately 5 g of soil was collected from the sample tube using a clean disposable syringe and nitrile gloves and placed in the methanol preserved sampling vial. Samples for the remaining parameters were collected in glass jars with Teflon lined lids, supplied by the laboratory.

The soil vapour concentrations were measured with a dual sensor RKI Eagle 2 combustible gas detector (operated in methane elimination mode)/photo ionization detector having a minimum detection level of 1 part per million by volume (ppmv).

The calibration of the RKI EAGLE 2 was checked before use.

Soil sampling descriptions along with soil headspace readings are presented on the borehole logs in **Appendix C**.

One soil sample from each borehole considered to be worst case based on visual observations and/or field screening results was selected for laboratory analysis. One additional deeper sample was submitted for laboratory analyses at MW3 to vertically delineate petroleum hydrocarbon impacted soil at that location.

The samples were stored in coolers with ice.

4.1.7 Groundwater Monitoring

On March 15, 2017 and April 13, 2017, the accessible monitoring wells were monitored for subsurface headspace vapour concentrations, water levels, and the presence or absence of free product.

The depth to the water table and presence or absence of free product in the wells were determined with a Heron H.OIL electronic interface probe that was cleaned with a mixture of phosphate-free soap and water, then rinsed with distilled water, between monitoring wells.

4.1.8 Groundwater Sampling

On March 15, 2017, groundwater samples were collected from the new on-Site monitoring wells that had sufficient groundwater to collect samples (MW2 and MW3). A return visit was made to the Site on March 16, 2017 to collect a groundwater sample from MW1 that did not have sufficient groundwater to sample the previous day. On April 13, 2017, a groundwater sample was collected from the new on-Site monitoring well (MW4).

The monitoring wells were sampled using a low-flow purging methodology to reduce sample turbidity. Low-flow purging was completed using a variable-flow peristaltic pump to remove groundwater from the mid-point of the monitoring well screened zone.

Prior to collecting the groundwater samples, the pump was connected to a flow-through cell equipped with a multimeter (Horiba U-22) that measured pH, conductivity, temperature, electrical conductivity, dissolved oxygen, REDOX, and turbidity.

The monitoring wells were low flow purged and the groundwater samples were generally collected when the pH, temperature, electrical conductivity, dissolved oxygen (DO), REDOX and turbidity measurements were generally considered stabilized. The pump and flow-through cell were connected to the monitoring wells with polyethylene and silicone tubing sections that were individually dedicated to each monitoring well. All groundwater samples were collected using the dedicated tubing.

Samples for analysis of BTEX, PHC fraction F1 and VOCs were placed in septum topped 40 mL clear glass vials (with zero headspace), pre-charged with sodium bisulphate preservative. Samples for analysis of PHC fractions F2 to F4 were collected in 500 mL amber glass bottles pre-charged with sodium bisulphate. The sample bottles were supplied by the analytical laboratory. The groundwater samples were placed in coolers with ice after they were collected.

4.1.9 Monitoring Well Repair

Hemmera retained Landshark Drilling Inc. to return to the Site on March 17, 2017 to replace the damaged monitoring well casing at MW2 that was damaged by a snowplough.

4.1.10 Quality Assurance and Quality Control

A quality assurance and quality control (QA/QC) program was implemented to reduce and quantify potential issues introduced during sample collection, handling, shipping and analysis. The program included, but was not limited to using sample specific identification and labelling procedures, and using chain of custody records.

4.1.11 Laboratory Analyses

The soil samples collected from the boreholes were submitted for laboratory analyses of one or more of the following parameters: BTEX, PHC (fractions F1 to F4), and VOCs.

The groundwater samples collected from the monitoring wells were submitted for laboratory analyses of one or more of the following parameters: BTEX, PHC (fractions F1 to F4), and VOCs.

The samples were submitted to the Maxxam Analytics Inc. laboratory in Mississauga, Ontario. Maxxam's Mississauga laboratory is accredited by the Standards Council of Canada. Analytical methods used by the laboratory are referenced in the certificates of analysis (C of As) presented in **Appendix D through G**. Analytical procedures were conducted in accordance with the MOECC *Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act.*

4.2 FINDINGS

4.2.1 Field Observations

4.2.1.1 Geophysical Survey

A report summarizing the results of the geophysical investigation completed on March 13, 2017 by OSL to identify the presence or absence of underground storage tanks (USTs) at the above referenced property (the Site) is presented in **Appendix B**. Note that no vent or fill pipes, or other features that would indicate the presence of a UST were identified. The report indicates that no USTs were identified during the geophysical investigation and Hemmera believes the USTs have been removed. The report identified areas that may be the location of disturbed soils due to the former USTs. The estimated areas of disturbed soils are presented on **Figure 2**.

4.2.1.2 Stratigraphy

The stratigraphic profile encountered with increasing depth at the borehole drilling locations generally consisted of asphalt or concrete; sand, silt, and clay fill; sand, silt and clay to the maximum depth of 6.1 mbgs.

The general stratigraphy of the soils beneath the areas of disturbed soils, possibly former UST tank nest soils (MW1 and MW3), consisted of asphalt; sand, silt and clay fill; sand and silt.

Sheen and petroleum odour was noted in the soil at MW2 at a depth of 0.2 to 3 mbgs and petroleum odour was noted in the soil at MW3 at depths of 0.3 to 1.5 mbgs and 3 to 4.2 mbgs.

Detailed stratigraphic descriptions are presented on the borehole logs in **Appendix C**.

4.2.1.3 Vapour Concentrations

Soil vapour concentrations measured in the samples recovered from the boreholes are presented on the logs in **Appendix C**. The soil vapour concentrations measured using the RKI Eagle 2 ranged from not detected (<1 ppmv) to 350 ppmv (hexane calibration) and not detected (<1 ppmv) to 50 ppmv (isobutylene calibration).

The vapour concentrations measured in the monitoring well headspaces on March 15, 2017 and April 13, 2017 are presented in **Table 1**. Subsurface vapour concentrations measured in the head space of the monitoring wells using the RKI Eagle 2 ranged from not detected (<1 ppmv) to 45% of the lower explosive limit (LEL) (hexane calibration) and not detected (<1 ppmv) to 47 ppmv (isobutylene calibration).

4.2.1.4 Groundwater

Measurable free product or a petroleum sheen (i.e. <1 mm) was not detected in either of the monitoring wells during groundwater monitoroing events conducted on March 15, 2017 and April 13, 2017. Depth to groundwater measurements for both of the monitoring events are presented in **Table 1**.

During the April 13, 2017 groundwater monitoring event, the measured depth to groundwater ranged from 1.95 mbgs at MW3 in the area of disturbed soil in suspected former UST nest to 4.84 mbgs at MW4 on Lakeshore Road East.

The groundwater flow direction was inferred to be to the east / southeast on April 13, 2017. This is generally consistent with regional topography which would indicate an inferred groundwater flow direction to the east / southeast towards Lake Ontario. The inferred groundwater flow direction is depicted on **Figure 4**.

4.2.2 Selected Site Condition Standards

The O.Reg. 153/04 (2011) generic site condition standards were used for comparison to the soil analytical results. The MOECC (2011) **Table 3** (non-potable) site condition standards for medium and fine textured soils and industrial/commercial/community property use were selected for comparison with the soil results for both on-Site and off-Site beneath Lakeshore Road East. In Ontario, roadways are classified as community land use. The applicable standards for soil beneath all roadways in Ontario are the industrial/commercial/community (ICC) standards. Hemmera classified the soil texture as medium to fine textured soils as determined by the borehole logs and grain-size analyses.

Note that LightPoint has indicated that the future land use may be changed to residential, as such the on-Site results were also compared to the residential/parkland/institutional (RPI) land use standards.

4.2.3 Soil Analytical Results

4.2.3.1 On-Site

The soil analytical results are presented on **Figure 5**. The on-Site soil analytical results compared to the currently applicable MOECC Table 3 standards for industrial/commercial/community land use are presented in the laboratory certificates of analysis in **Appendix D**. The on-Site soil analytical results compared to the MOECC Table 3 standards for potential future residential/parkland/institutional land use are presented in the laboratory certificates of analysis in **Appendix E.**

Concentrations of PHC fraction F1 exceeded the MOECC Table 3 standards for both the commercial and residential land use standards at one location (MW3); the area of disturbed soil identified by the geophysical survey at the southeast central portion of the Site in a sample collected at a depth of 0.6 to 1.5 mbgs. The results indicate that PHC impacted soil is present within the backfill area of the former

gasoline UST nest. Petroleum hydrocarbon impacted soil at this location is vertically delineated by a soil sample collected from MW3 at a depth of 0.6 to 1.5 mbgs that was below the MOECC Table 3 standards for both the commercial and residential land use.

The soil analytical results from remaining on-Site borehole locations (BH1, MW1, and MW2) submitted for BTEX, PHC fractions F1 to F4 and VOCs were below the MOECC Table 3 standards for both the commercial and residential land use.

4.2.3.2 Off-Site Lakeshore Road East

The off-Site soil analytical results are presented in the laboratory certificates of analysis in **Appendix F** and **Figure 5**. The results of soil samples submitted for BTEX and PHC fractions F1 to F4 from the off-Site boreholes (BH2 and HMW4) were well below the Table 3 standards for industrial/commercial/community land use.

4.2.4 Groundwater Analytical Results

The groundwater analytical results are presented in the laboratory certificates of analysis in **Appendix G**. The results of groundwater samples from both on-Site and off-Site monitoring well locations submitted for BTEX, PHC fractions F1 to F4 and VOCs were well below the MOECC Table 3 standards.

4.2.5 Quality Assurance and Quality Control Results

The results of the laboratory QA/QC analyses are presented in the laboratory certificates of analysis in **Appendix D through G**. The analyses included surrogate recoveries, method blanks, matrix duplicates, matrix spikes, and spiked blank samples. No laboratory QA/QC issues were identified that call into question the reliability of the laboratory data reported.

5.0 SUMMARY

A summary of the Phase I ESA potential environmental concerns and key findings Phase II ESA completed at the Site are as follows:

- A number of issues of potential environmental concern were identified related to the Site (presence of USTs containing gasoline and waste oil, and operation as a service station and automotive repair and sales facility possibly from 1952 to 1976) and the adjacent property at 160 Lakeshore Road East (presence of UST and AST containing waste oil and operated as an automotive repair facility as early as 1928). As a result of this information, Hemmera was retained to complete a Phase II ESA.
- The groundwater flow direction was inferred to be to the east / southeast on April 13, 2017.
- The results of soil and groundwater samples from on-Site and off-Site boreholes / monitoring wells submitted for VOCs were below the MOECC Table 3 standards for both commercial and residential land use.

- Concentrations of PHC fraction F1 exceeded the MOECC Table 3 standards for both the commercial and residential land use standards at one location (MW3); the area of disturbed soil identified by the geophysical survey at the southeast central portion of the Site in a sample collected at a depth of 0.6 to 1.5 mbgs. The results indicate that PHC impacted soil is present within the backfill area of the former gasoline UST nest. The PHC impacted soil is vertically delineated.
- The soil analytical results from remaining on-Site borehole locations (BH1, MW1, and MW2) submitted for BTEX, PHC fractions F1 to F4 were below the MOECC Table 3 standards for both the commercial and residential land use.
- The soil analytical results from off-Site borehole locations (BH2 and MW4) submitted for BTEX, PHC fractions F1 to F4 were below the MOECC Table 3 standards for industrial/commercial/community land use downgradient of the Site. Note that in Ontario, roadways are classified as community land use.
- The results of groundwater samples from both on-Site and off-Site monitoring well locations submitted for BTEX, PHC fractions F1 to F4 and VOCs were well below the MOECC Table 3 standards.

Based on the available information, the objective of delineation of off-Site impacts in soil and groundwater has been achieved and no further work is required at this time.

6.0 CLOSURE

We trust the foregoing information is satisfactory for your requirements.

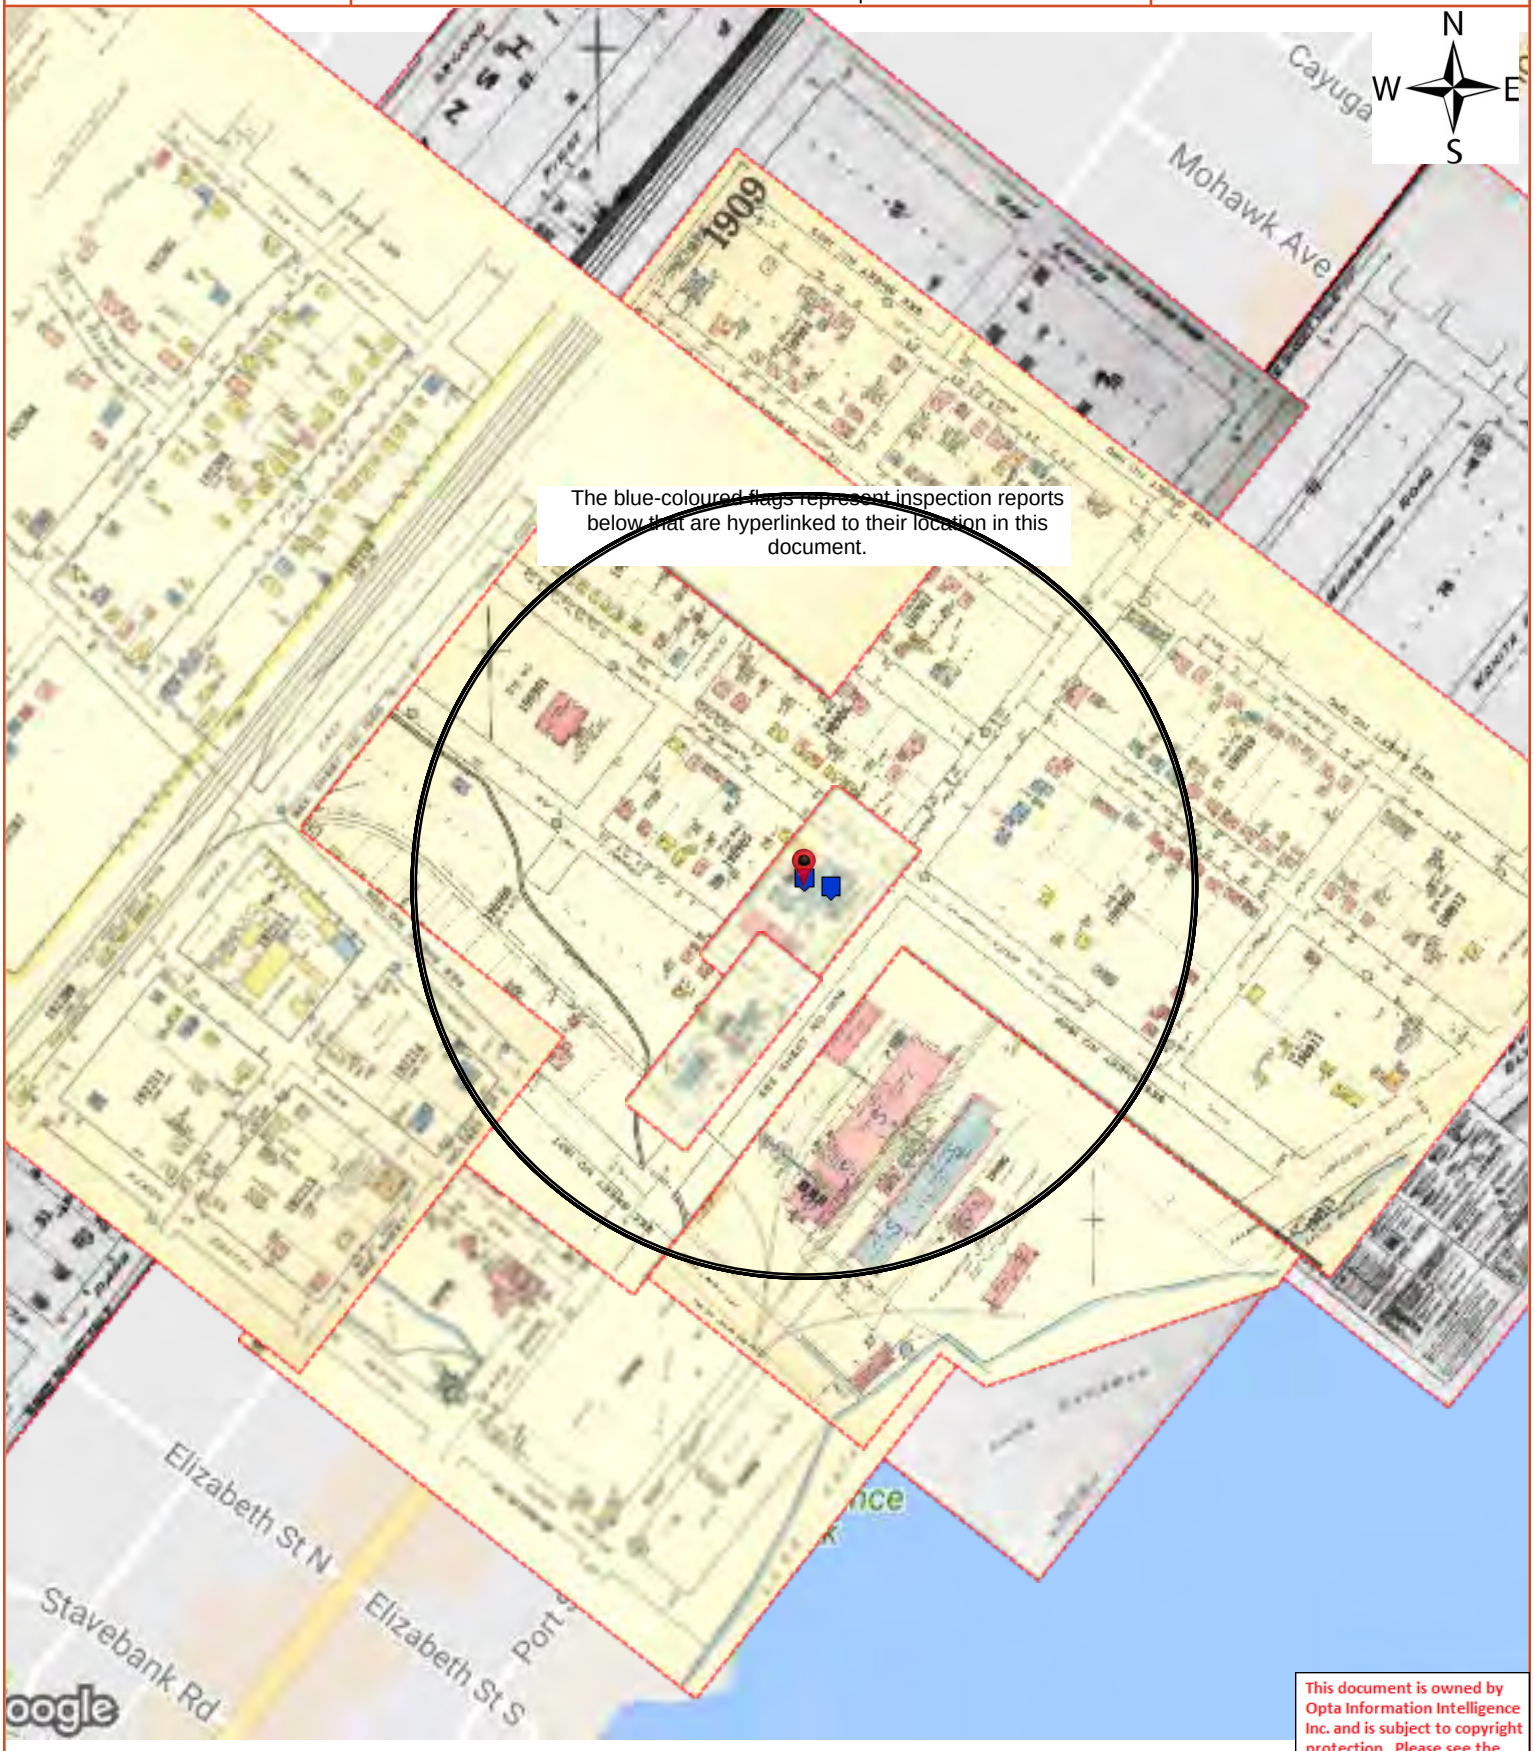
OPTA INFORMATION INTELLIGENCE



The blue-coloured flags represent inspection reports below that are hyperlinked to their location in this document.

Opta Historical Environmental Services Enviroscan™ Terms and Conditions

Report

The documents (hereinafter referred to as the "Documents") to be released as part of the report (hereinafter referred to as the "Report") to be delivered to the purchaser as set out above are documents in Opta's records relating to the described property (hereinafter referred to as the "Property"). Opta makes no representations or warranties respecting the Documents whatsoever, including, without limitation, with respect to the completeness, accuracy or usefulness of the Documents, and does not represent or warrant that these are the only plans and reports prepared in association with the Property or in Opta's possession at the time of Report delivery to the purchaser. The Documents are current as of the date(s) indicated on them. Interpretation of the Documents, if any, is by inference based upon the information which is apparent and obvious on the face of the Documents only. Opta does not represent, warrant or guarantee that interpretations other than those referred to do not exist from other sources. The Report will be prepared for use by the purchaser of the services as shown above hereof only.

Disclaimer

Opta disclaims responsibility for any losses or damages of any kind whatsoever, whether consequential or other, however caused, incurred or suffered, arising directly or indirectly as a result of the services (which services include, but are not limited to, the preparation of the Report provided hereunder), including but not limited to, any losses or damages arising directly or indirectly from any breach of contract, fundamental or otherwise, from reliance on Opta Reports or from any tortious acts or omissions of Opta's agents, employees or representatives.

Entire Agreement

The parties hereto acknowledge and agree to be bound by the terms and conditions hereof. The request form constitutes the entire agreement between the parties pertaining to the subject matter hereof and supersedes all prior and contemporaneous agreements, negotiations and discussions, whether oral or written, and there are no representations or warranties, or other agreements between the parties in connection with the subject matter hereof except as specifically set forth herein. No supplement, modification, waiver, or termination of the request shall be binding, unless confirmed in writing by the parties hereto.

Governing Document

In the event of any conflicts or inconsistencies between the provisions hereof and the Reports, the rights and obligations of the parties shall be deemed to be governed by the request form, which shall be the paramount document.

Law

This agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

NOTE: The sole purpose of this report is to provide insurance pricing and underwriting information about the particular insured and location named. Only the person requesting this survey will receive a copy of the report, and IAO asks that it be kept strictly confidential. This report does not guarantee compliance with any standards or with any federal, provincial or municipal codes, ordinances or regulations. Tests of fire and other protection equipment have not been conducted or witnessed during this survey.

IAO reports, prepared in compliance with commonly accepted risk control standards existing at the time services are rendered, are developed from a survey of the premises and/or from data supplied by or on behalf of the Purchaser. IAO does not purport to list all hazards. While changes and modifications, referred to in the reports are designed to upgrade protection and loss prevention of the premises, IAO assumes no responsibility for management and control of these activities. IAO will not be responsible to the Purchaser for any loss or damages, whether consequential or other, however caused, incurred or suffered, as a result of the services being provided.

This document is owned by Opta Information Intelligence Inc. and is subject to copyright protection. Please see the full Terms and Conditions at the front of this document.

170 RD LAKESHORE E; MISSISSAUGA H P A, ONTARIO

M U L T I R I S K - F I R E, L I A B I L I T Y A N D
B A S I C C R I M E

OCCUPANCY:

The insured is a tenant at this location. They have been in operation since 1997 and at this location for 1 year(s). They occupy 930 sq. m and are the major occupant, having 12 employees. The premises are in good condition. The insured is interested in loss prevention, however there have been losses during the last 3 years.

* Loss History

* Occupancy Description (Insured / major tenant if insured is non-occupant)

This area is occupied by the insured for a retail fruit/vegetable and grocery store. Typical foods are sold including a meat/cheese counter at the rear, but no cooking, or smoking.

* Other Classes of Occupants

Butcher shop and bakery

* Undersirable Features

None

Risk is Rateable under the Commercial Property Fire Schedule.

REMARKS:

* Fire, Liability & Basic Crime - The insured is located in a busy commercial/residential neighbourhood of Mississauga, known as Port Credit. This is a well established neighbourhood located on Lakeshore Road East east of Hurontario Street. Overall the building is in good condition and has been well maintained over the years. There are no unusual or unsafe process charges assocciated with this risk. The insured is co-operative, responsible and interested in loss control. Housekeeping is good and the supply of portable fire extinguishers is standard with updated service tags attached.

No recommendations made at this time.

Dear Mr. Indovina, Oil Contamination

As promised, I enclose photographs of the opening to the oil tank that was found in the back yard of 160 Lakeshore Road East, Mississauga.

If you have inspected the site yourself as I suggested to you this morning, you can see the traces of oil oozing out from the foundation of your building located at 170 Lakeshore Road East, Mississauga. This would indicate that the tank would be straddling under both properties.

As I am going away for Christmas and the New Year holidays, please contact Mr. Howard Dixon at his office for any questions regarding the cleaning up of the site. His phone no. is (416) 746 2141 Ext. 125).

Season's greetings!

Yours truly,

D. Do

Oil Contamination at
160 and 170 Lakeshore Road East
Mississauga

Dear Mr. Indovina,

I enclose two original copies of the amended agreement which I trust, you and Mr. Rinella will find satisfactory and acceptable.

My amendments follow your general concerns and I added only a few details that address our common problem more thoroughly.

Kindly sign and return to me one copy by fax and one original copy by express mail or by courier, so that work can be commenced immediately.

Should you have any questions, please do not hesitate to call me at (416) 499 1629. This number is also my fax number.

I will send you photo-graphs of the site when they are ready.

Thank you for your kind co-operation.

Yours truly,

D. Quang

AGREEMENT

This Agreement made this 14th day of December, 1993

BETWEEN:

BERLIANCO INC.
160 Lakeshore Road East
Mississauga, Ontario

(hereinafter referred to as "Owner")

OF THE FIRST PART

- and -

JOE INDOVINA and PETER RINELLA
170 Lakeshore Road East
Mississauga, Ontario

(hereinafter sometimes jointly referred to as "Owner")

OF THE SECOND PART

(and collectively all referred to as "Owners")

WHEREAS Berlianco Inc. is the owner of 160 Lakeshore Road East, Mississauga, Ontario;

AND WHEREAS Joe Indovina and Peter Rinella together are the owner of 170 Lakeshore Road East, Mississauga, Ontario;

AND WHEREAS it has been determined that there is petroleum contamination in the test pit at 160 Lakeshore Road East, Mississauga, Ontario;

AND WHEREAS it appears said contamination is the result of a storage tank buried in the ground between 160 Lakeshore Road East and 170 Lakeshore Road East, Mississauga, Ontario;

AND WHEREAS the Owners are desirous of determining the cause of said contamination and effecting a clean-up of the contaminated area;

THE OWNERS HEREBY AGREE AS FOLLOWS:

1. To retain the services of John Emery Geotechnical Engineering Limited and Kal Dixon Construction Corp. on their behalf to take all necessary steps to:

   a) determine the cause of the contamination, including all tests incidental thereto;
   b) locate the storage tank or other container/source from which the contamination is emanating;
   c) if required by the Ministry of Environment, to obtain a written quotation for the cost of removal of any tank (or other container) so located and removal of any contaminated soil, oil and/or other substances in order to be able to obtain confirmation that no further contamination (or source thereof) remains;
   d) do all steps necessary and incidental to meet Ministry of Environment requirements;
   e) replace any necessary soil or other material necessary to repair the ground surface where removal occurred.

2. All costs of testing, removal and clean-up, as above set out (save for 1 e)), shall be paid equally by the Owners directly to the party retained to provide the service requested and will be paid forthwith in accordance with the agreed payment terms. It is understood and agreed that any cost to replace soil in accordance with 1 e) above and to remedy or repair any buildings or other structure located on either Owner's lands shall not be a joint account but shall be the sole responsibility of each Owner and such work shall not form a part of this Agreement and shall be a separate and distinct matter.

3. Each Owner agrees to indemnify and save harmless the other for any costs or expenses incurred as a result of default in payment by an Owner to any third party rendering services as set out herein and for which the non-defaulting Owner shall become liable or shall incur any costs, including legal fees, to defend against.

4. Each Owner hereby consents to the entry over their respective lands and/or building by any third parties retained in accordance with this Agreement. Each Owner hereto agrees that all reports and information obtained pursuant to the terms of this Agreement shall be mutually shared and shall not be solely for the benefit of only one Owner. The Owners agree to so direct all third parties accordingly.

5. The Owners agree to look solely to the third parties retained to perform services in accordance with the terms hereof for any damages, costs or expenses arising from any defect, negligence or other unsatisfactory performance of work or material provided and shall not hold the other Owner responsible for same.

6. Each Owner shall maintain their own insurance coverage in addition to any liability insurance obtained from any third party retained by the Owners.

7. Each Owner shall be solely responsible to any tenant, licensee or other occupant of all or any part of their property for any matters arising from the work set out herein and will be responsible to obtain any consents to enter, test, excavate, construct or do such other work as shall be required.

8. No work shall be authorized to any third party other than as set out in this Agreement and only after the Owners shall have determined and agreed to the cost of same with the party to perform it.

9. The cost-sharing set out in this Agreement is limited solely to the matters contained herein and shall not apply to any claim instituted by any third party for damages arising to their property from contamination caused or alleged caused to have occurred by reason of seepage, spill or otherwise.

10. Notwithstanding the terms hereof, nothing contained herein shall be deemed an admission of any liability for any contamination found.

The parties agree that this Agreement sets out the entire agreement among them and that no terms hereof can be varied, amended or altered except if done in writing and signed by all the parties.

Upon payment of all monies required to be paid by the Owners to third parties and the issuance by the Ministry of Environment of a certificate or other confirmation of satisfactorily having cleaned up the contamination, this Agreement shall be at an end and deemed complete.

This Agreement is binding upon the parties, their respective heirs, executors, administrators, successors and assigns.

Dated at Mississauga, this 14th day of December, 1993.

Tank Status: RC Established
Attribute Category: FS-Perform P-line Inc Invest
Task Number: 3433870
Type: FS-Pipeline Incident
Incident Number: 638900
Status Code: Pipeline Damage Reason Est
Summary: 1 Hurontario Street, Mississauga - Vapour Release
Spills Action Centre: 5245-8KDL95
Reported By: Dave Dunstan - Enbridge
Affiliation: Industry Stakeholder (Licensee/Registration/Certificate Holder, Facility Owner, etc.)
Method Details: E-mail
Fuel Category: Natural Gas
Fuel Occurrence Type: Vapour Release
Date of Occurrence: 8/3/2011 0:00
Occurrence Start Date: 2011/08/03
Health Impact: No
Occurrence Desc: gas leak on 2" pipe
Environment Impact: No
Property Damage: No
Service Interupt: No
Fuel Type: Natural Gas
Enforce Policy: Yes
Operation Type: Commercial (e.g. restaurant, business unit, etc)
Damage Reason: Excavation practices not sufficient
Public Relation: No
Pipeline System:
Pipeline Type: Service / Riser Distribution Pipeline
Depth:
Pipe Material: Steel
Regualtor Location: Outside
PSIG: 2
Regulator Type: Service Regulator (up to 60 psi intake)
Notes: this is a release from service line

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ***Note:*** *Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory: Provincial AAGR

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory: Provincial AGR

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2016

Abandoned Mine Information System: Provincial AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2014

Anderson's Waste Disposal Sites: Private ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Automobile Wrecking & Supplies: Private AUWR

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: Oct 31, 2016

Borehole: Provincial BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2014

Certificates of Approval: Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Commercial Fuel Oil Tanks: Provincial CFOT

Since May 2002, Ontario developed a new act where it became mandatory for fuel oil tanks to be registered with Technical Standards & Safety Authority (TSSA). This data would include all commercial underground fuel oil tanks in Ontario with fields such as location, registration number, tank material, age of tank and tank size.

Government Publication Date: Oct 31, 2016

Chemical Register: Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: Oct 31, 2016

Compressed Natural Gas Stations: Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 31, 2012

Inventory of Coal Gasification Plants and Coal Tar Sites: Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions: Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Nov 2016

Certificates of Property Use: Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Dec 2016

Drill Hole Database: Provincial DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886-Aug 2015

Environmental Activity and Sector Registry: Provincial EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Nov 2016

Environmental Registry: Provincial EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Dec 2016

Environmental Compliance Approval: Provincial ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Nov 2016

Environmental Effects Monitoring: Federal EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches: Private EHS

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Aug 2016

Environmental Issues Inventory System: Federal EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event: Provincial EMHE

The Emergency Management Historical Event data class will store the locations of historical occurrences of emergency events. Events captured will include those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance.

Government Publication Date: May 31, 2014

List of TSSA Expired Facilities: Provincial EXP

This is a list of all expired facilities that fall under the TSSA (TSSA Act & Safety Regulations), including the six regulations that exist under the Fuels Safety Division. It will include facilities such as private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. These tanks have been removed and automatically fall under the expired facilities inventory held by TSSA.

Government Publication Date: Oct 31, 2016

Federal Convictions: Federal FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land: Federal FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government.

Government Publication Date: June 2000-Oct 2015

Fisheries & Oceans Fuel Tanks: Federal FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sept 2003

Fuel Storage Tank: Provincial FST

The Technical Standards & Safety Authority (TSSA), under the Technical Standards & Safety Act of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

Government Publication Date: Oct 31, 2016

Fuel Storage Tank - Historic: Provincial FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary: Provincial GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Sep 2016

Greenhouse Gas Emissions from Large Facilities: Federal GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO2 eq).

Government Publication Date: 2013 - Dec 2014

TSSA Historic Incidents: Provincial HINC

This database will cover all incidences recorded by TSSA with their older system, before they moved to their new management system. TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. The TSSA works to protect the public, the environment and property from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from pipelines, diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks: Federal IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

TSSA Incidents: Provincial INC

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Includes incidents from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

Government Publication Date: Oct 31, 2016

Landfill Inventory Management Ontario: Provincial LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the ministry compiles new and updated information. The inventory will include small and large landfills. Additionally, each year the ministry will request operators of the larger landfills complete a landfill data collection form that will be used to update LIMO and will include the following information from the previous operating year. This will include additional information such as estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills will include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Dec 31, 2013

Canadian Mine Locations: Private MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences: Provincial MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2016

National Analysis of Trends in Emergencies System (NATES): Federal NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports: Provincial NCPL

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2014

National Defense & Canadian Forces Fuel Tanks: Federal NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills: Federal NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Aug 2010

National Defence & Canadian Forces Waste Disposal Sites: Federal NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Wells: Federal NEBW

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES): Federal NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory: Federal NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory: Federal NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-2014

Oil and Gas Wells: Private OGW

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-Jun 2016

Ontario Oil and Gas Wells: Provincial OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Oct 2016

Inventory of PCB Storage Sites: Provincial OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders: Provincial ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994-Dec 2016

Canadian Pulp and Paper: Private PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009

Parks Canada Fuel Storage Tanks: Federal PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register: Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: 1988-Oct 2016

TSSA Pipeline Incidents: Provincial PINC

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. This database will include spills, strike and leaks from recorded by the TSSA.

Government Publication Date: Oct 31, 2016

Private and Retail Fuel Storage Tanks: Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water: Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994-Dec 2016

Ontario Regulation 347 Waste Receivers Summary: Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2013

Record of Site Condition: Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.
RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Dec 2016

Retail Fuel Storage Tanks: Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: Oct 31, 2016

Scott's Manufacturing Directory: Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills: Provincial SPL

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Dec 2016

Wastewater Discharger Registration Database: Provincial SRDS

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-2014

Anderson's Storage Tanks: Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks: Federal TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970-Jan 2015

TSSA Variances for Abandonment of Underground Storage Tanks: Provincial VAR

The TSSA, under the Liquid Fuels Handling Code and the Fuel Oil Code, all underground storage tanks must be removed within two years of disuse. If removal of a tank is not feasible, you may apply to seek a variance from this code requirement. This is a list of all variances granted for abandoned tanks.

Government Publication Date: Oct 31, 2016

Waste Disposal Sites - MOE CA Inventory: Provincial WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: 1970-Nov 2016

Waste Disposal Sites - MOE 1991 Historical Approval Inventory: Provincial WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System: Provincial WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Jun 30, 2016

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

APPENDIX B
Geophysical Survey

March 19, 2017

Trevor Janzen
Hemmera Envirochem Inc.
1540 Cornwall Road
Suite 104
Oakville, Ontario
L6J 7W5
Canada

Dear Mr. Janzen,

Hemmera Envirochem Inc. (the Client) has retained OnSite Locates Inc. (OSL) to perform a geophysical investigation at 170 Lakeshore Road East, Mississauga, Ontario. The object of this survey was to identify the presence or absence of an underground storage tanks that was reported to have been located on the property. This work was completed on March 13, 2017.

1.0 SITE DESCRIPTION

The subject property is currently occupied by a commercial plaza located on the north side of Lakeshore Road East in Mississauga, Ontario. Based on information provided by the client, there are two locations where USTs may have been located. The areas are shown on the attached Figure 1.

2.0 METHODOLOGY

To achieve the above objective, detailed reconnaissance geophysical mapping using Geonics EM-61 and Sensors & Software 250 MHz Ground Penetrating Radar instruments were used for this study.

2.1 Geonics EM-61 Electromagnetic Induction Survey Instrument

The EM-61 is a time-domain metal detector, which detects both ferrous and nonferrous metals. A transmitter generates a pulsed primary magnetic field into the ground, which induces eddy currents in nearby metallic objects. The eddy current decay produces a secondary magnetic field measured by the horizontal receiver coils. By taking the measurement at a time after the start of the decay, the current induced in the ground has fully dissipated and only the current in the subsurface metal is still producing a secondary field. According to the manufacturer, the EM-61 can detect a single 200-litre (55-gallon) drum at a depth of over 3 meters beneath the instrument, yet is relatively insensitive to nearby cultural interference, such as fences, buildings and power lines etc. The EM-61 can detect much smaller objects closer to the surface. The amplitude of the response depends on the distance between the coil assembly and target.

It is important to note, as with any geophysical survey, the instruments detect material physical property contrasts on the surface and to the depth limitation of the instrument. If a significant physical property contrast exists on the surface, this can and will mask responses from any materials at greater depths. Also, while the instruments used in this survey were designed for these types of investigations, various combinations of physical property contrasts can potentially exist to yield results similar to those observed in this survey. Therefore, while the anomalies should represent metallic objects, the anomalies truly represent significant material property contrast from the nearby material to produce an anomaly.

2.2 Sensors & Software Ground Pentrating Radar 250 Mhz Noggin Instrument

Ground-penetrating radar (GPR) uses radar pulses to image the subsurface. This method uses electromagnetic radiation in the microwave band (UHF/VHF frequencies) of the radio spectrum, and detects the reflected signals from subsurface structures. GPR can be used in a variety of media, including rock, soil, ice, fresh water, pavements and structures. It can detect objects, changes in material, and voids and cracks. The specific system used in this survey was equipped with 250 MHz antennas in a shielded configuration to reduce the impact of air waves not related to subsurface features.

GPR works well under ideal conditions and is fairly easy to interpret; however, under moderate to poor conditions a high level of expertise is required to interpret the results accurately. Ideal conditions for GPR are dry sandy soils; wet and clay type soils and standing salt water produce very poor to no results due to attenuation of the transmitted signal.

3.0 FIELD ACQUISITION

3.1 Electromagnetic Induction - EM61

The study areas were in the paved area in the front of the commercial plaza There were no surface features present that would indicate the presence of a UST. The instrument was paired with a GPS unit and the data georeferenced to UTM coordinates, using the WGS84 datum. The location of the geophysical survey area is shown on the site plan on Figure 1.

3.2 Ground Penetrating Radar

The GPR instrument was run on a grid regular to the orientation of the streets and building. The GPR was run on lines directed in a south to north direction and a west to east direction to better delineate any subsurface anomalies.

The maximum depth of signal penetration is primarily dependent on the soil conductivity (penetration depth is inversely proportional to the soil conductivity). The approximate depth of GPR signal penetration at this site was 1.5 m.

4.0 DATA COMPILATION AND PRESENTATION

4.1 Electromagnetic Induction - EM61

The results from the EM61 data are plotted on Figure 2. The contours were generated using the triangular with linear interpolation gridding algorithm and plotted on aerial imagery to give spatial reference to the geophysical results. The results from the most representative EM61 results are plotted on Figure 2.

The response from the EM-61 channels reveal responses due to metallic objects within the depth range of the instrument. The background instrument response was from generally in the range of 0 to 100 mV, with peak instrument response in excess of 2000 mV. Responses above the background response may represent the presence of metallic objects, but this response can vary depending on depth and the concentration of the mass of metallic objects located in that area.

4.2 Ground Penetrating Radar

The GPR operates at a frequency that permits the propagation of the EM signal through the subsurface. The travel time of the reflected signal and the intensity of the reflected signal is recorded by the GPR unit and is presented as intensity vs. time. In general, discrete subsurface features present themselves as hyperbola shaped features because these discrete features reflect the EM signal before and after the antenna passes over the object.

5.0 DISCUSSION OF RESULTS

GPR and EM grid scans were performed within the study area. An outline of the study is shown on Figure 1.

The results of the collected EM61 data are presented on Figure 2. The instrument response was plotted and the largest anomalous response appeared to be associated with a catch basin and sign structure located near the center of the property.

The results of the collected GPR data are presented on Figure 3. Within the collected GPR data there were no distinct and coincident anomalies that would describe the location of an intact UST within the survey area. Reviewing the collected data, there were areas that appeared to be of a different dielectric permittivity as the surrounding material and that could be an area where material was distinct from the

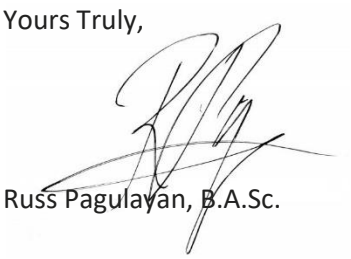
surrounding soils either in packing or material. The lack of a distinct UST like anomaly may indicate that the USTs have been removed or otherwise decommissioned.

A set of linear anomalies were observed in the data that appeared to coincide with the location of the pipe invert from the catch basin.

An interpretation plot is presented on Figure 4. The location of the areas of varying dielectric permittivity is presented there. These locations may be the location of disturbed soils possibly due to the former USTs. Additionally, the set of linear anomalies that may be the pipe from the catch basin sewer are plotted on the interpretation plot.

If you have any questions or require anything further, please call me at the number below. Thank you for the opportunity to work on this project with you and for choosing OSL.

Yours Truly,



Russ Pagulayan, B.A.Sc.

APPENDIX 2

Terms and Conditions – Geophysical Survey

** PLEASE REVIEW ALL TERMS AND CONDITIONS LISTED IN THE FOLLOWING PAGES OF THIS REPORT. BY RETAINING OSL, THE CLIENT AGREES TO THESE TERMS AND CONDITIONS**

1. Data Presentation
   - 1.1. The Geophysical data were acquired at the station spacing and on the date as defined in the letter report attached to the original copy of this document.
   - 1.2. If an interpretation is presented on site, paint marks and a sketch will be provided.
   - 1.3. GPR data is presented in a depth slice format along a survey line, displayed from left to right. The GPR data is a representative image of the GPR signal amplitude and is not an accurate image of the subsurface.
   - 1.4. Geophysical data recorded on site is re-examined after the completion of the survey and the interpretation is outlined in the letter report.

2. Technical Limitations

The interpretation of the geophysical data obtained during the investigation is intended for the guidance of the Client only. Should this interpretation of the data be used during any subsequent programs, the user must be aware of the following interpretive restrictions:

- 2.1. The Client acknowledges that the laws of fundamental physics apply and do not enable OnSite Locates Inc. (OSL) locating equipment to detect all utilities, objects, features and structures or to provide all coordinates of the position thereof. Pipe, cable, conduit, utilities, objects, features or structures which are not detectable (i.e. not “Locatable”) because of the laws of fundamental physics cannot be located by OSL and are not the subject of the provision of the “Service” pursuant to this contract.
- 2.2. The “Service” provided to this contract is the location, laterally and longitudinally, of utilities, objects, features or structures and the subsequent marking of the site according to the standard subsurface utility locating industry practice. The depth and/or size of pipe, cable, conduits, utilities, objects, features and structures is recorded only if the client has requested prior to the start of the survey.
- 2.3. A “detectable feature” defined by this investigation may consist of a cable, wire, pipe, conduit, structure or other object contained within the subsurface. Differentiation between these types

of features is not promised nor guaranteed. A feature is only detectable if the subsurface allows the GPR signal to propagate deep enough to define the feature. GPR penetration into the subsurface varies depending upon the subsurface conditions and is not controlled by the radar equipment or the technician's ability. Limited penetration is caused by snow, dissolved solids, moisture, voids, and features having a significant electromagnetic variance.

2.4. Accuracy of inferred buried detectable features will vary due to subsurface soil conditions and surface conditions (i.e. loose dirt, ice, snow, tall grass and water).

2.5. OSL is not liable for damages, if any, resulting from physical exposure of any 'detectable feature' by the Client, or their representatives, or their sub-contractors, or any other person, or corporation, based on the information provided.

2.6. Areas considered to be inaccessible (an "Inaccessible Area") for the Service include, but are not limited to, the following: those of physically restricted access; those covered by a structure or object (i.e. building walls, vehicles, equipment, debris, stockpiles of material or snow, etc.); those covered by open water; those covered by woods or vegetation too thick to permit easy walking; those with surfaces terrain slopes steeper than 1:3; and, those where the safety of the technician is jeopardized (i.e. unstable footing, environmental hazards, uncontrolled roads, etc.). The judgement of the OSL Technician will prevail on accessibility decisions.

2.7. It is the responsibility of the Client to provide direct and simple access free from surface objects to any and all survey areas. OSL accepts no responsibility for surveying in any areas where the Client does not provide access and/or appropriate workplace safety measures. Areas considered to be inaccessible for scanning and marking, aside from restricted access, include the following, but not limited to: covered or within 0.8m of a structure or objet (i.e. walls, vehicles, equipment, debris, stockpiles of materials, etc.).

3. Limits on OnSite Locates Inc. Liability

3.1. Any information provided by OSL regarding the location of underground utilities by GPR survey does not substitute for a full private utility locate performed by OSL and an authorized location by the owners of the underground facilities. The Service is provided to assist with excavation planning only. The Client is always responsible for obtaining sanctioned locates from the owners of underground plant such as electric cables, natural gas, any type of pipeline, telecommunication, cable TV, fibre-optic cables, water, sewer, oil, steam, etc. The Client must contact the utility owners directly, or their call-centre, to facilitate these locates.

3.2. OSL marking of underground features is only for the convenience of the Client, and this does not relieve the Client, or any other person, or corporation, from liability for damages for person injury including death, or for property damage or liability caused to or from any underground utility, within the area on the property where the underground utility and/or clearance was

marked, or any other property, by reason of the Client, its representatives, or any other person, or corporation having relied upon the surface marking provided by OSL.

3.3. OSL is not liable for damages resulting from physical exposure of any underground features by the Client, its representatives, their sub-contractors or any other person or corporation.

3.4. The Service completed by OSL is based on information provided by the Client at or prior to the earlier of the time when the Service is described in this contract or the performance of the Service. The Service provided by OSL regarding the location of any underground utility, object or structure, is on a best effort and best practices basis.

3.5. A re-mark of surficial markings placed on the site by OSL must be obtained prior to any excavation if:

3.5.1. markings become unclear, disappear, are disturbed or displaced;

3.5.2. the sketch and site markings do not coincide;

3.5.3. the work location has changed;

3.5.4. if anything occurs which may indicate that a new or better or different locate service is needed.

3.6. If the Client excavates outside the limit of survey area or any of the circumstances identified in Section 2.6, OSL accepts no responsibility.

3.7. The Client warrants that OSL is not liable for any claims for damages to any underground plant where OSL was not notified of such damage forthwith such that OSL can complete a damage investigation to physically view any such damaged underground plant whether or not any such damage may be attributed to errors or omissions committed by OSL in performing the work.

3.8. OSL shall not be liable for any amount in excess of the fees paid by the Client to OSL for the Service on account of any loss, injury, death or damage whether resulting directly or indirectly to a person or property irrespective of the cause or origin of such loss, injury, death or damage including, without limitation, loss, injury, death or damage attributable to the negligence of OSL, its employees and agents in the performance or non-performance of the Service.

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

CERTIFICATE OF ANALYSIS

MAXXAM JOB #: B751501

Received: 2017/03/14, 18:40

(1) No lab extraction date is given for F1BTEX & VOC samples that are field preserved with methanol. Extraction date is the date sampled unless otherwise stated.
(2) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	1.3°C

Sample EBA763 [MW3-1.2] : F1/BTEX Analysis: Due to high concentration of target analytes, sample required dilution. Reporting limits were adjusted accordingly.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	1.3°C

Revised reprot (2017/04/05): Criteria is included in this report.

Sample EBA700 [TCLP] : NF/NI = Non Flammable and Non Ignitable.

Results relate only to the items tested.

			Matrix Spike		SPIKED BLANK		Method Blank		RPD		Leachate Blank	
QC Batch	Parameter	Date	% Recovery	QC Limits	% Recovery	QC Limits	Value	UNITS	Value (%)	QC Limits	Value	UNITS
4905061	Leachable Total PCB	2017/03/18	89	30 - 130	97	30 - 130	<3.0	ug/L	NC	40		

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Leachate Blank: A blank matrix containing all reagents used in the leaching procedure. Used to determine any process contamination.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

CERTIFICATE OF ANALYSIS – REVISED REPORT

MAXXAM JOB #: B751501

Received: 2017/03/14, 18:40

(1) No lab extraction date is given for F1BTEX & VOC samples that are field preserved with methanol. Extraction date is the date sampled unless otherwise stated.
(2) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	1.3°C

Revised report (2017/03/22): Criteria has been updated as requested.

Sample EBA763 [MW3-1.2] : F1/BTEX Analysis: Due to high concentration of target analytes, sample required dilution. Reporting limits were adjusted accordingly.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) No lab extraction date is given for F1BTEX & VOC samples that are field preserved with methanol. Extraction date is the date sampled unless otherwise stated.
(2) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	4.3°C

Sample EFB615 [BH2-1.2] : BTEX/F1-F4 analysis has been completed for this sample as per client request.

Results relate only to the items tested.

Hemmera Envirochem Inc
Client Project #: 2076-002.03
Your P.O. #: 2076-002.03
Sampler Initials: JAB

			Matrix Spike		SPIKED BLANK		Method Blank		RPD	
QC Batch	Parameter	Date	% Recovery	QC Limits	% Recovery	QC Limits	Value	UNITS	Value (%)	QC Limits
4947742	Total Xylenes	2017/04/20					<0.040	ug/g	0.21	50
4948628	F2 (C10-C16 Hydrocarbons)	2017/04/21	92	50 - 130	89	80 - 120	<10	ug/g	NC	30
4948628	F3 (C16-C34 Hydrocarbons)	2017/04/21	96	50 - 130	91	80 - 120	<50	ug/g	NC	30
4948628	F4 (C34-C50 Hydrocarbons)	2017/04/21	91	50 - 130	86	80 - 120	<50	ug/g	NC	30

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

Volatile Organic Compounds and F1 PHCs	2	N/A	2017/03/17	CAM SOP-00230	EPA 8260C m

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

CERTIFICATE OF ANALYSIS – REVISED REPORT

MAXXAM JOB #: B774694
Received: 2017/04/13, 14:04

Sample Matrix: Water
Samples Received: 1

Analyses	Quantity	Date Extracted	Date Analyzed	Laboratory Method	Reference
Petroleum Hydro. CCME F1 & BTEX in Water	1	N/A	2017/04/19	CAM SOP-00315	CCME PHC-CWS m
Petroleum Hydrocarbons F2-F4 in Water (1)	1	2017/04/20	2017/04/20	CAM SOP-00316	CCME PHC-CWS m

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).
