**Re: Wind Tunnel Proceeding Letter
3115 Hurontario Street
RWDI Reference No. 2406897**

On behalf of RWDI, we are pleased to announce that we are proceeding with a new wind tunnel test for the 3115 Hurontario Street project in Mississauga, Ontario. The scope of this test includes reviewing the latest updated design and landscaping of the project, followed by conducting the wind tunnel test to evaluate the effectiveness of the implemented changes.

We anticipate improved results for the grade-level wind conditions due to the addition of canopies and recessed entrances for retail and charity spaces, as well as resulting from the intensification of the corridor through as-of-right building heights and approved future new developments in the vicinity. For above-grade wind conditions, RWDI has been informed that the rooftop amenity landscape design is a submission requirement of the Site Plan Approval (SPA) submission. At that time, the wind conditions will be re-evaluated. Mitigation measures to be considered during the SPA will include, but are not limited to, the incorporation of tall guardrails along the amenity perimeter, hardscaping features such as screens, and the use of trellises or pergolas.

Yours truly,

RWDI
